# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

\*\*\* Hot, dry weather will continue, weekend thunderstorms not looking as possible \*\*\*

High pressure is still dominating our weather pattern for a continuation of hot, dry conditions across the Northern California region overall prevailing into early next week. It does appear likely that a low pressure trough will move through the Pacific NW later Thursday into this weekend. Just a bit of cooling and some increase in wind speeds are now what is expected from that change in weather pattern for the region. There is also some uncertain chance that a few afternoon thunderstorms could develop just south of Tahoe Sunday and Monday as some tropical moisture enters the picture from the south as a hurricane decays well west of Baja. The marine layer along the coast will vary in depth this week and continue to not reach very far inland.

High temperatures will remain and low Relative Humidity (RH) will continue to be mostly 100-104 in the warmest inland valleys, although dense smoke cover can lower those numbers a bit. Low RH values will also continue to be from about 7-17% in the driest locations. Much lighter westerly afternoon winds are expected west of the Coast Range and through its gaps in places Wednesday and Thursday with somewhat gusty S to SW winds expected east of the Coast Range. Those southerly winds will be a bit stronger Thursday with afternoon gusts 15-25 mph near and east of the Cascade/Sierra crest and locally in the northern Sacramento Valley.

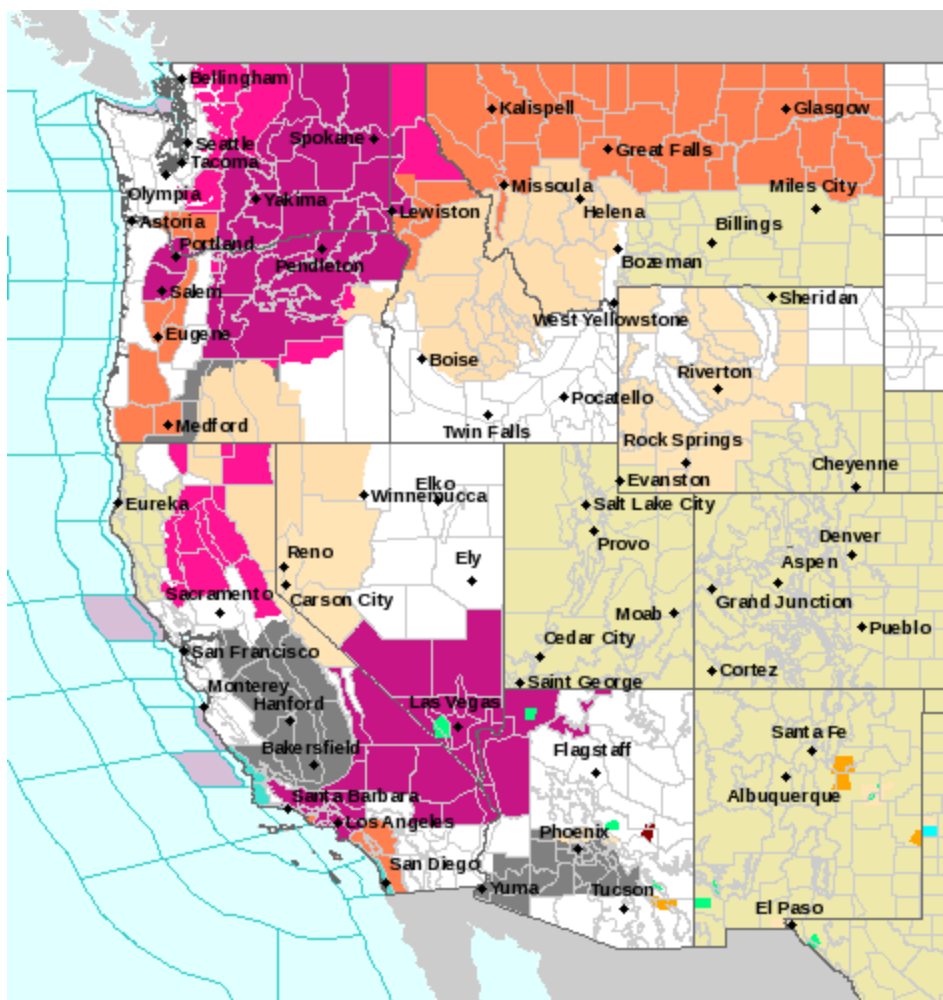

## **SOUTHERN CALIFORNIA**

\*\*\*Isolated wet thunderstorms returning to a few areas later this week\*\*\*

Wednesday, highs will drop 3-5 degrees due to a weakening of offshore pressure gradients, but in general, expect temperatures to remain around 10 degrees above normal through the end of the week with highs of 100-105 in the valleys and lower foothills. A slow spreading of monsoonal moisture is expected over Southern California which will lead to a bit higher RH across areas from Los Angeles County south and eastward. Isolated wet storms will be possible each afternoon beginning Wednesday across the deserts south of I-15 and the east sides of the San Bernardino and Cleveland National Forests. This weekend, temperatures will moderate a bit and some return of sea breezes can be expected. Isolated storms may spread into the Sierras over the weekend.
